# DIAGNOVITAL 2019-NCOV REAL-TIME PCR KIT

DIAGNOVITAL® SARS-CoV-2 CE-IVD is a real-time RT-PCR-based detection system for the 2019 Wuhan coronavirus (SARS-CoV-2). SARS-CoV-2 is considered a novel human coronavirus that is genetically distinct from the common human coronaviruses (229E, NL63, OC43, HKU1) and is also genetically distinct from the two newer human coronaviruses, MERS-CoV and SARS-CoV.

DIAGNOVITAL® SARS-CoV-2 Real Time PCR Kit CE-IVD detects the presence of 2 different and highly specific gene sequences of SARS-CoV-2: E gene and RdRP gene. Additionally, a non-infectious positive control and a negative human extraction control are included.
